

----- FOR IMMEDIATE RELEASE -----

Get Ready for the Hay Season with a Delmhorst Hay Moisture Meter!

Now that spring is here, hay farmers around the country wait in anticipation of the first cutting later in the season. Experts agree that monitoring the moisture content of hay not only helps to preserve leaves, color, and feed value, it also reduces the possibility of mold development while in storage. When harvest time comes, it's critical to use a moisture meter to ensure that high quality hay is produced. Whether in the windrow, while baling, or in storage, Delmhorst meters measure hay moisture every step of the way with speed, accuracy, and reliability.

Prepare for the harvest now with the purchase a hay moisture meter, or calibration of an existing meter by our trained technicians. With the ruggedly constructed **F-2000**, check moisture right after cutting or in the bale with easy to use controls and a sharp digital display. For high volume producers who need the time-saving convenience of on-the-go monitoring, the **FX-2000** adds the ability to check hay moisture during baling, without even leaving the tractor. For more information on **F-2000**, **FX-2000**, and our full line of hay moisture meters, call today or look for our products at a local dealer.
